Financial Decision-Making in the Foodservice Industry-Amit Sharma 2019-12-20 The study of decision-making in foodservice is still a relatively new area of scholarly interest. The application of cost-benefit analysis and behavioral finance and economics in the foodservice context is rare. This volume, Financial Decision-Making in the Foodservice Industry: Economic Costs and Benefits, fills that gap and focuses on cost-benefit analysis, decision-making, behavioral finance, economic theories, and their application in foodservice and restaurant industry. The volume synthesizes these major themes by developing new theoretical foundations and presenting findings from the investigation of managerial practice. The authors cover an abundance of topical issues, including ethical obligations in foodservice, sustainability issues in the foodservice/restaurant industry, farm-to-school and local food expenditures in school foodservice settings, managerial traits and behavior in the foodservice industry, and more.

IEEE Recommended Practice for Grounding of Industrial and Commercial Power Systems-IEEE Industry Applications Society. Power Systems Engineering Committee 1992 The problems of system grounding, that is, connection to ground of neutral, of the corner of the delta, or of the midtap of one phase, are covered. The advantages and disadvantages of grounded versus ungrounded systems are discussed. Information is given on how to ground the system, where the system should be grounded, and how to select equipment for the grounding of the neutral circuits. Connecting the frames and enclosures of electric apparatus, such as motors, switchgear, transformers, buses, cables conduits, building frames, and portable equipment, to a ground system is addressed. The fundamentals of making the interconnection or ground-conductor system between electric equipment and the ground rods, water pipes, etc. are outlined. The problems of static electricity (how it is generated, what processes may produce it, how it is measured, and what should be done to prevent its generation or to drain the static charges to earth to prevent sparking) are treated. Methods of protecting structures against the effects of lightning are also covered. Obtaining a low-resistance connection to the earth, use of

ground rods, connections to water pipes, etc, are discussed. A separate chapter on sensitive electronic equipment is included.
